

MB&F (Maximilian Busser and Friends)

Horological Machine No. 2 (HM2)

8

Origin The brand was founded in 2005 and HM2, its second creation, was launched in 2007. Founder Maximilian Busser continues his vision of collaborating with industry experts.

Designed for Watch collectors who are looking for complicated models – small machines, even – with a different take.

Unusual good looks The case comes in four versions: white gold and titanium (125 pieces), red gold and titanium (125 pieces), ceramic and red gold (33 pieces) and ceramic and titanium (66 pieces). With two domes sheltering the complications, it looks like a mini space station on the wrist.

Technical prowess It boasts the world's first mechanical movement featuring more than 450 components with the following complications: instantaneous jumping hours and retrograde minutes on the right dial and bi-hemispherical moon phase and retrograde date on the left dial.
