

LUXEFINDER

TIME MACHINE

MB&F's Horological Machine No. 2 shows off its complicated mechanics through a transparent case in the new HM2-SV version, limited to 25 examples. \$88,000, 310.470.1388, mbandf.com

ENGINE

The 349-part movement, developed by Jean-Marc Wiederrecht, offers automatic winding and a highly energy efficient complication for jumping hours and concentric retrograde minutes.

VISION

The complex form of the precisely shaped sapphire crystal case pushes the limits of crystal technology beyond what was thought possible. Although it is 3.6 mm thick, the crystal is polished to perfect clarity and treated with anti-reflective coating on both sides.
